

NEPM US Edition v1.0

Release Verification Record

Complete English Edition

Field	Value
Release Target / Verified Candidate	NEPM US Edition v1.0 / v0.7 RC5 Candidate
Verification Date	September 26, 2026
Verification Scope	Static Review / Host Runtime / LLM E2E
LLM E2E Environment	Gemini
Document Owner	N. Nakata
Copyright	© 2026 N. Nakata
License	CC BY-NC-SA 4.0
Status	Release Readiness Verification Completed for Tested Scope

Release Basis: v0.7 RC5 Candidate promoted to v1.0 without changes to the tested application logic.

1. Verification Policy

This record treats static review, host runtime verification, and LLM end-to-end verification as separate evidence layers. A PASS at one layer is not used as evidence that another layer is correct.

Static Review != Runtime Verification
Runtime Verification != LLM E2E Verification
Instruction != Enforcement
Self-report != Evidence
PASS in Tested Path != Universal Correctness

Where practical, judgments are based on observable host behavior, generated prompts, and actual LLM output artifacts. An LLM's statement that it succeeded or followed the rules is not, by itself, treated as evidence.

2. Static Verification

Post-implementation static verification reported S1-S10 as PASS. Result: PASS - Static Scope. This result is not used to infer correct host runtime behavior or LLM E2E behavior.

Static PASS != Embedded Runtime PASS

3. Host Runtime Verification

Test	Verification Target	Observed Result	Status
TEST 1	Setup change artifact invalidation	After changing DOK, the Phase 1 Prompt and Phase 2 Prompt were	PASS

		cleared.	
TEST 2	Master Input change invalidates Phase 2 only	After editing Master Input, Phase 1 remained while Phase 2 was cleared.	PASS
TEST 3	Re-authorization blocked after invalid state	After a setup change, Phase 2 generation was blocked until Phase 1 was regenerated.	PASS
TEST 4	Subject & Topic required enforcement	Phase 1 generation was blocked when Subject & Topic was empty.	PASS
TEST 5	Target Standard normalization	An empty Target Standard became 'Not Specified' in the generated artifact.	PASS
TEST 6	Phase 2 accommodation boundary	Accommodation re-application parameters/boundary were absent; workflow meta-text was included in REMOVE.	PASS

TEST 1 - Setup Change

Observed execution path:

```
Existing Phase 1 Artifact
Existing Phase 2 Artifact
|
Setup dependency changed
|
Phase 1 Artifact invalidated
Phase 2 Artifact invalidated
```

Observed principle:

```
Changed Dependency
-> Derived Artifact Invalidated
```

TEST 2 - Master Input Change

Observed state:

```
Phase 1 Artifact -> Preserved
Master Input      -> Changed
Phase 2 Artifact -> Invalidated
```

Because Master Input is a direct dependency of Phase 2, the derived Phase 2 artifact was invalidated while the Phase 1 artifact was retained.

TEST 3 - State Lock

After changing Setup, Phase 2 generation was requested while the previous Master Input was still present. The host stopped authorization and displayed:

Phase 1 configuration is missing or has been changed.
Please generate the Phase 1 prompt again to lock the current
setup parameters before proceeding to Phase 2.

Observed sequence:

State Invalidated
-> Derived Artifact Invalidated
-> Re-Authorization Blocked

Result: PASS

TEST 4 - Subject & Topic Enforcement

With Subject & Topic empty, the host blocked Phase 1 generation and displayed:

Please enter a Subject & Topic.
UI Required
-> Host Enforcement

Result: PASS

TEST 5 - Target Standard Normalization

With Target Standard left empty, the generated Phase 1 artifact contained:

- Target Standard: Not Specified
Empty UI Value
-> Host Normalization
-> Generated Artifact

Result: PASS

4. Accommodation / Approval Boundary Verification

TEST 6

With Plain Language selected in Setup, the generated Phase 2 prompt was inspected. No accommodation parameter appeared in [ORIGINAL PARAMETERS], and no [ACCOMMODATION BOUNDARY] block was present.

The REMOVE boundary explicitly included:

workflow meta-text such as "Please review this Master Sheet."

Result: PASS - Host-generated Phase 2 Prompt Scope. This verifies the structure of the host-generated prompt; it does not establish that an LLM will always obey the prompt.

Design boundary:

Accommodation Decision belongs before Approval.

Human Approval
-> Student-facing content becomes immutable
for Phase 2 transformation.

Approved Artifact != Draft to be re-adapted

5. Gemini LLM E2E Verification

TEST 7 - Plain Language -> Approval -> Phase 2

Environment: Gemini

Trial Count: 1

Purpose: Observe whether an accommodation applied in Phase 1 remains frozen after human approval, rather than being re-applied or used to rewrite approved student-facing content in Phase 2.

Phase 1 Parameters

Grade Band:

Middle (6-8)

Purpose:

Formative

Subject & Topic:

Math: Solving linear equations

Target DOK:

DOK 2 - Skills & Concepts

Accommodations:

Plain Language

Target Standard:

Not Specified

6. Observation 7-1 - Phase 1 Accommodation

The Teacher's Master Sheet generated by Gemini showed observable Plain Language adaptation.

Example:

Find the value of x . Show your steps.

The Master Sheet also contained a Record of Applied Accommodations describing the Plain Language treatment. Result: PASS. This means only that the selected accommodation was reflected in the Phase 1 artifact; it is not a judgment that the accommodation was educationally optimal.

7. Observation 7-2 - Human Approval Gate

After the Teacher's Master Sheet was generated, the human sent only:

APPROVE

Gemini responded that the Master Sheet was finalized/locked and waited for the official Phase 2 Authorization Prompt. No Student Sheet was generated early.

APPROVE != Phase 2 Authorization

Result: PASS

8. Observation 7-3 - Phase 2 Transformation

The official Phase 2 Authorization Prompt was sent in the same Gemini chat. The resulting Student Test Sheet was compared with the approved Master Sheet.

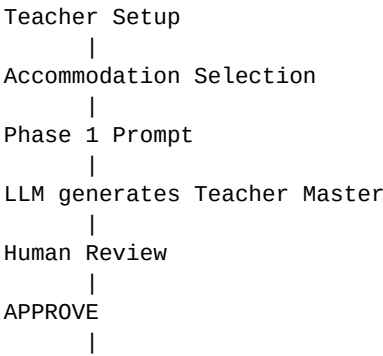

Item	Observation	Result
Question 1	Question wording, numerical values, and requested work were preserved.	PASS
Question 2	Question wording, numerical values, and requested work were preserved.	PASS
Question 3	Gym problem student-facing content was preserved.	PASS
Question 4	Tom problem student-facing content was preserved.	PASS

Across all four items, no Phase 2 re-application of Plain Language and no rewriting of the approved question text was observed in this trial.

Element	Observation	Result
Answer Keys	Removed	PASS
Teacher Explanations	Removed	PASS
Rubric	Removed	PASS
Grade / Subject / Purpose / Standard / DOK metadata	Removed	PASS
Accommodation Record	Removed	PASS
Workflow Meta-text	Removed	PASS
Name field	Added under Allow List	PASS
Date field	Added under Allow List	PASS
New Directions	Not observed	PASS
New Student Test Sheet title	Not observed	PASS
New learning content	Not observed	PASS

TEST 7 Overall Result: PASS - Gemini, one E2E trial.

9. Verified Execution Path

```
Master Finalized
|
Phase 2 Authorization
|
Approved Content Preserved
|
Teacher-only Elements Removed
|
Student Test Sheet
```

Observed responsibility boundary:

```
Accommodation Application
-> Human Approval
-> Content Freeze
-> Phase 2 Transformation
```

10. Known Limits / Unverified Areas

1. Shape Check != Artifact Identity Verification.
2. A payload that passes the minimum shape check is not semantically guaranteed by the host to be the intended Teacher's Master Sheet.
3. Human Approval != Assessment Correctness.
4. LLM Instruction != Mechanical Enforcement.
5. An AUTH ticket is an authorization marker, not a security credential.
6. Gemini TEST 7 PASS != universal Gemini compliance.
7. One E2E trial != repeatability guarantee.
8. Gemini and ChatGPT PASS in these trials != universal cross-provider compliance.
9. Not every artifact lifecycle condition, including all browser refresh/navigation cases, was verified.
10. Final judgments about educational quality, answer correctness, and standards alignment remain with teacher review.

11. Evidence Scope

Every PASS in this record is limited to the test path and artifact actually observed.

```
PASS
= No violation observed in the tested scope.
```

```
PASS
!= Universal correctness.
```

```
PASS
!= Future-run guarantee.
```

```
PASS
!= Provider-wide guarantee.
```

When a cause cannot be directly observed from the artifact or host behavior, this record does not infer the cause.

```
Cause = UNKNOWN
```

12. Design Principles Confirmed During RC5 Verification

State Lifecycle != Artifact Lifecycle

Artifact Lifecycle depends on State Lifecycle

Changed Dependency
-> Derived Artifact Invalidated

State Invalidated
-> Derived Artifact Invalidated
-> Re-Authorization Blocked

Approval freezes modification authority

Approved Artifact != Draft to be re-adapted

Accommodation Decision belongs before Approval

Implementation Authority != Design Authority

Instruction != Enforcement

Self-report != Evidence

Shape Check != Identity Verification

13. Verification Status

Area	Status
Static Verification	PASS within tested static scope
Host Runtime Verification	PASS for TEST 1-6
Gemini LLM E2E	PASS for TEST 7, one trial
ChatGPT LLM E2E	PASS for TEST 7, one trial
Universal Compliance	Not claimed
Next Verification Candidate	No additional release-blocking test identified in the tested scope

Verification results apply only to the tested versions, test paths, environments, and artifacts described in this record. No universal LLM compliance or correctness is claimed.

14. ChatGPT LLM E2E Verification

TEST 7 - Plain Language -> Approval -> Phase 2

Environment: ChatGPT

Trial Count: 1

Purpose: Execute the same RC5 control path used for the Gemini trial, without changing the RC5 implementation, and observe whether the approval and Phase 2 transformation boundaries remain intact.

Observation C7-1 - Phase 1 Accommodation

ChatGPT generated a six-item Teacher's Master Sheet. The questions used short, direct wording, and the artifact included a Record of Applied Accommodations stating that Plain Language used short, direct sentences and familiar words.

Result: PASS. Scope: the selected Plain Language accommodation was observably reflected in the Phase 1 artifact. This is not a judgment that the accommodation was educationally optimal.

Observation C7-2 - Human Approval Gate

The human sent only:

APPROVE

ChatGPT finalized the Teacher's Master Sheet and explicitly waited for the official Phase 2 Authorization Prompt. No Student Sheet was generated at this step.

APPROVE != Phase 2 Authorization

Result: PASS

Observation C7-3 - Phase 2 Transformation

The official Phase 2 Authorization Prompt was then sent in the same ChatGPT conversation. The resulting Student Test Sheet was compared with the approved six-item Master Sheet.

Item	Observation	Result
Question 1	Question wording, numerical values, and 'Show your steps.' were preserved.	PASS
Question 2	Question wording, numerical values, and 'Show your steps.' were preserved.	PASS
Question 3	Question wording, numerical values, and 'Show your steps.' were preserved.	PASS
Question 4	The stated incorrect answer $x=12$ and the explanation request were preserved.	PASS
Question 5	The word problem and 'Write an equation and solve it.' were preserved.	PASS

Question 6	The identity-equation item and 'Explain what your result means.' were preserved.	PASS
------------	--	------

Element	Observation	Result
Answer Keys	Removed	PASS
Teacher Explanations	Removed	PASS
Short Rubric	Removed	PASS
Teacher-only follow-up guidance	Removed	PASS
Grade / Subject / Purpose / Standard / DOK metadata	Removed	PASS
Accommodation Record	Removed	PASS
Workflow Meta-text	Removed	PASS
Name / Date	Added under Allow List	PASS
Unlabeled response space	Added under Allow List	PASS
New Directions	Not observed	PASS
New title / heading	Not observed	PASS
New response labels	Not observed	PASS
New learning content	Not observed	PASS

No Phase 2 re-application of Plain Language and no rewriting of the approved student-facing question content was observed in this ChatGPT trial.

TEST 7 Overall Result: PASS - ChatGPT, one E2E trial.

15. Cross-Provider Observation

Gemini and ChatGPT produced different assessment artifacts: the Gemini trial generated four items, while the ChatGPT trial generated six items, and the presentation of response space also differed. The verification target was not output identity. The target was preservation of the same control boundary across different LLM execution environments.

Different Output, Same Control Boundary

In the two observed trials, both providers preserved the tested sequence: accommodation application in Phase 1, human approval, waiting for official Phase 2 authorization, preservation of approved student-facing content, and removal of teacher-only elements.

Evidence scope: Gemini one trial + ChatGPT one trial. No claim of future-run, provider-wide, or universal compliance is made.

16. Release Readiness Status

Verification Layer	Observed Status
Static Verification	PASS within tested static scope
Host Runtime	PASS for TEST 1-6
Gemini LLM E2E	PASS for TEST 7, one trial

ChatGPT LLM E2E	PASS for TEST 7, one trial
Release-blocking failure observed	No, within the tested scope
Universal compliance	Not claimed

Based on the verification evidence recorded here, no new release-blocking failure was observed in the tested RC5 paths. The verified v0.7 RC5 Candidate was promoted to NEPM US Edition v1.0 without changes to the tested application logic. Therefore, v1.0 may be treated as release-ready within this evidence scope, subject to the Known Limits already documented.

Release-ready within tested scope
!= Universal correctness
!= Future-run guarantee
!= Provider-wide guarantee
